Installing Syncthing as a service in Ubuntu

Installing Syncthing and then adding it as a service in Ubuntu:

1. Add the Syncthing APT repository key:

```
curl -s https://syncthing.net/release-key.txt | gpg --dearmor | sudo tee /etc/apt/trusted.gpg.d/syncthing.gpg > /dev/null
```

2. Add the Syncthing APT repository:

```
echo "deb https://apt.syncthing.net/ syncthing stable" | sudo tee /etc/apt/sources.list.d/syncthing.list
```

3. Update your package database:

```
sudo apt update
```

4. Install Syncthing:

```
sudo apt install syncthing
```

5. Start Syncthing:

```
syncthing
```

Alternatively, you can set up Syncthing to run as a service:

```
sudo systemctl enable syncthing@$USER.service
```

```
sudo systemctl start syncthing@$USER.service
```

These steps should help you install and start Syncthing on your Ubuntu system.
