Reinstalling Ubuntu WSL on Windows from PowerShell

This is when you want to throw your build out the window and start fresh:

```
wsl --unregister Ubuntu
```

```
wsl --install -d Ubuntu
```

Now you can start with a fresh install of Ubuntu in Windows Subsystem for Linux.

To list all registered WSL distributions on your PC, run this command:

```
wsl --list --verbose
```

Or the shorthand:

```
wsl -l -v
```

This will show output like:

```
  NAME              STATE         VERSION
* Ubuntu-22.04        Running       2
  Debian            Stopped       2
```

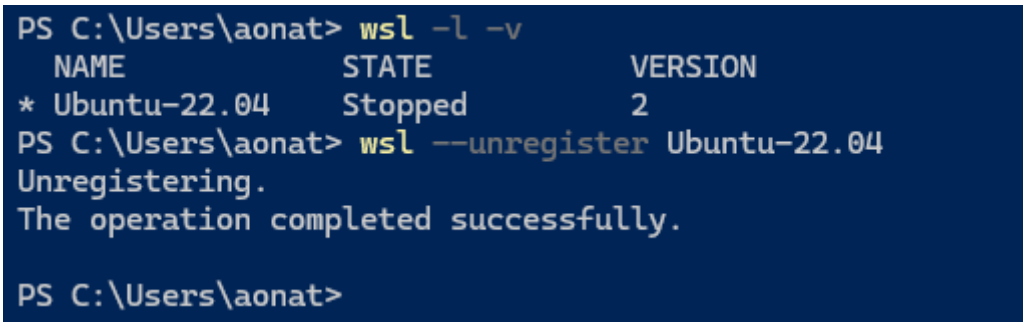

- The `*` indicates the default distribution.
- You can then unregister any of them using:

```
wsl --unregister <DistributionName>
```

For example:

```
wsl --unregister Ubuntu-22.04
```

Make a backup of anything you need before removing it.
