Test Provider	Pearson VUE

---

## ☐☐ Domains & Objective Breakdown

# 1. System Management (32%)

- Understand Linux fundamentals and the Filesystem Hierarchy Standard (FHS)
- Manage files, directories, and permissions
- Configure local storage and partitions
- Build and install software from source
- Use services and process management tools
- Network configuration and troubleshooting

# 2. Security (21%)

- Implement security best practices and access control
- Identity and user management
- Firewall configuration (e.g., `firewalld`, `iptables`)
- Secure remote management (e.g., SSH)
- File integrity, auditing, and hardening practices

# 3. Scripting, Containers, and Automation (19%)

- Create and run shell scripts for task automation
- Basic container usage and management (e.g., Docker)
- Git basics for version control
- Infrastructure-as-Code concepts
- Understand orchestration tools and container lifecycle

# 4. Troubleshooting (28%)

- Diagnose and fix:
  - Storage issues (mounts, space, permissions)
  - Network problems (DNS, IP config, services)
  - CPU and memory bottlenecks
  - User access or file permission issues
- Use tools like `top`, `htop`, `journalctl`, and `systemctl` for diagnostics
